

Quickset tile adhesive

Description

A product based on cement, specific aggregates, additives, and mixed resins that is cured quickly and brings about fast adhesion.

Advantages and applications

- Appropriate for floor tiling indoor, outdoor and exterior walls
- Due to having the quality of preserving the moisture, there is no need to moisturize the bed or tiles.
- Without slippage and having high primary adhesive power
- Having high adhesive quality and being quite consistent with less porous building materials.
- Quick setting

Dosage

Around 4 kilograms for 1 square meter of ordinary surfaces.

How to use

Gently add 4 kilograms of the powder to 1 liter of water and mix it adequately to make a homogenous paste. Then the paste is ready to use.

Wait for 5 minutes and then mix it again. Rub the paste, with a maximum 2mm thickness, on the given surface by a trowel. Disperse the paste with a toothed trowel to regulate its thickness. Put the tile on the paste, press it and turn a little to make sure that the paste is completely attached to the tile.

Notice: To have a better performance, put the tile on the paste immediately after it is rubbed on the surface.

Specifications

Appearance: gray powder

Bulk density: $1.4 \pm 0.2 \text{ g/cm}^3$

Paste density: $1.6 \pm 0.2 \text{ g/cm}^3$

Shelf time: approximately 1 hour (concerning weather conditions)

Holding time before execution: approximately 8 hours (concerning weather conditions)

Setting time at $23 \pm$ degrees of centigrade: approximately 3 hours

Approximate efficiency: 4 kg/m^2

Packaging and maintenance: Keep in 4-ply 25-kg packages with plastic cover in roofed places out of sunlight in a temperature between 5 and 35 degrees of Celsius for one year.
