

Admix prime 109

Description

This primer is a thick paste in the form of an emulsion whose diluted type can be used with water. After using, its water gets evaporated and creates a flexible and resistant stratum that does not dissolve in water. It doesn't need to be heated and can be used in normal temperature.

Advantages

- No pollution and environmental friendly
- Easy to use
- No risk of fire
- Good adhesion on various metal, wooden, and concrete surfaces

Dosage

Regarding the pollution of the air and soil in the given area and the surface dents and projections, the dosage is various. However, each kilogram of this admix covers from 1 to 2 square meters.

How to use

After cleaning the given area, add 10 to 15 percent of insulator weight from this adhesive and mix thoroughly to gain a homogenous mixture. Then rub this material on the surface or inside the cracks.

Specifications

Appearance: tar and resin with minerals

Solvent: water

Flammability: non-flammable

Paste density: 1.09 ± 0.02

Packaging: keep in 17-kg sealed containers out of sunlight

Safety points: due to its emulsion and hardening properties, wash your body quickly in case of touching.
